ApnoMart Sales Analysis — Strategic Insights Report

Project: The Insight Board - Business Intelligence Dashboard
Analyst: Ajanya Vinayan
Organization: ApnoAI Data Analytics Internship
Tool Used: Power BI Desktop
Date: 28 October 2026

Data Coverage: 1 May 2026 – 28 October 2026
Dataset Size: 1,200 distinct orders

---

1. Executive Summary

This report analyzes ApnoMart's sales dataset to evaluate revenue performance, profitability, regional contributions, and customer purchasing behavior. The Power BI dashboard uses KPI cards, bar charts, a monthly sales trend, a profit margin comparison, a payment method visualization, and an interactive region slicer.

Across 1,200 distinct orders, ApnoMart generated total sales of ₹16,261,998.30 and total profit of ₹4,419,736.17, resulting in an overall profit margin of 27.18%. The analysis identifies Furniture as the leading category by revenue, Office Supplies as the highest-margin category, and the Corporate customer segment as the largest contributor to sales.

These findings provide a basis for improving product-level profitability, allocating marketing budgets, and developing customer-focused strategies for the next quarter.

2. Insight 1: Revenue Pattern

Furniture generated the highest sales among the five product categories, contributing ₹3,518,270.00, or 21.63% of total revenue. Office Supplies followed with ₹3,380,834.45, representing 20.79% of total sales. In the monthly analysis, July recorded the highest sales at ₹2,957,618.40, while October recorded ₹2,472,054.20 through 28 October.

So What: Furniture is an important revenue driver and should receive appropriate inventory and marketing support. July's strong performance also provides a useful reference for reviewing seasonal demand. However, October is an incomplete month, so its sales should not be directly compared with full months without accounting for the difference in reporting periods.

3. Insight 2: Profitability Pattern

Office Supplies achieved the highest profit margin at 34.80%, generating ₹1,176,657.32 in profit from ₹3,380,834.45 in sales. In contrast, Electronics recorded the lowest profit margin at 18.88%, generating ₹558,395.07 in profit from ₹2,957,520.05 in sales. Regionally, Central generated the highest total profit at ₹943,677.84, while North recorded the lowest at ₹795,107.30.

So What: Office Supplies represents a strong opportunity for profitable growth. Electronics requires further investigation into product costs, pricing, and discount effectiveness. Regional marketing budgets should consider both revenue potential and profit contribution instead of relying on sales figures alone.

4. Insight 3: Customer Behavior Pattern

The Corporate segment generated the highest sales among the customer segments, contributing ₹4,311,027.50, or 26.51% of total revenue. It also generated ₹1,164,985.03 in profit across 307 distinct orders. Cash was the leading payment method by sales value, accounting for ₹3,574,076.95, or 21.98% of total revenue, followed by UPI at ₹3,347,484.50, or 20.58%.

So What: ApnoMart should investigate opportunities to strengthen relationships with Corporate customers through relevant offers, account-based promotions, and repeat-purchase incentives. Since payment preferences are relatively distributed across the five methods, the company should continue supporting multiple payment options while monitoring transaction costs and customer preferences.

5. Strategic Recommendation

For the next quarter, ApnoMart should prioritize profitable growth by expanding targeted promotions for Office Supplies, reviewing the pricing and cost structure of Electronics, and developing retention initiatives for Corporate customers. Marketing investments should be evaluated using both sales contribution and profit margin, while regional performance should be monitored to identify opportunities for more efficient spending.

The company should track total sales, total profit, profit margin, category performance, and customer-segment contribution through the interactive Power BI dashboard. This approach will help management evaluate the results of its decisions and adjust its strategy based on measurable business outcomes.

6. Dashboard Overview

The Power BI dashboard contains the following components:

- KPI cards for Total Sales, Total Profit, Total Orders, and Profit Margin.
- A bar chart showing Sales by Category.
- A line chart showing the Monthly Sales Trend.
- A bar chart showing Total Profit by Region.
- A bar chart comparing Profit Margin by Category.
- A donut chart showing Sales by Payment Method.

- An interactive Region slicer for exploring regional performance.

The dashboard enables users to compare business performance across product categories, regions, months, and payment methods.

7. Conclusion

The analysis shows that ApnoMart has generated ₹16.26 million in sales and ₹4.42 million in profit across 1,200 distinct orders during the period analyzed. Furniture leads in revenue, Office Supplies delivers the highest profit margin, and Corporate customers contribute the largest share of sales. Electronics presents an opportunity for further profitability analysis.

By combining the dashboard with these data-backed insights, management can make more informed decisions about inventory, pricing, marketing allocation, and customer retention.
